

Claims

[c1] What is claimed is:

1. A modified anti-armor gun wherein the weapon is modified to fire from the open bolt;

[c2] 2. A modified anti-armor gun according to claim 1 wherein the forward momentum of the recoiling masses offsets a significant portion of the recoil impulse from firing, reducing the recoil energy absorbed by the shooter and/or weapon mount;

[c3] 3. A modified anti-armor gun according to claim 2 wherein the drive spring is increased to increase the forward momentum of the recoiling masses to offset a greater portion of the recoil impulse and recoil energy from firing;
